Voestalpine Steel Division has roughly 10% share of the European automotive industry market and is ranked third among the suppliers. In the white products area, the company is ranked second with a 20% market share and it also has around 20% of the European radiator market. Voestalpine Steel Division is the largest European supplier of light and special sections and is the second largest electrical sheet producer.

Voestalpine discovered and perfected the LINZ method of making high quality steel. LINZ method is used in 80% of the world's production of steel. They have also developed a technique called Head Special Hardening (HSC), which is now being copied by others in the industry. Moreover, they produce the most railroad tracks in Europe and also the longest track in the world. As a supplier of products to 60 countries in the world, Voestalpine manufactures switches for 21 worldwide Railroad crossing factories and produces 71,000 tonnes of railroad per month.

5,041,000m³ water per month is used for cleaning, cooling, and production control. In other words, water is exposed to heat, aggression, contaminants and toxins.

Installing the Original Grander System allowed for a more consistent cooling and less cleaning of the die moulds, thus returning high quality water to the environment.

From Grander's point of view, water picks up the energy vibration from this multitude of items. Grander Technology can erase this energy imprint 'pick up' and ultimately make the world an environmentally cleaner place to live.

FULL COMFORT

Voestalpine 的鋼鐵部在歐洲的汽車市場中約有 10%佔有率，而且是位列第三的供應商；在白色產品的市場的佔有率約有 20%，排第二；在歐洲散熱器市場約佔有 20%。除此之外，她是歐洲中最大的輕及特別鋼品供應者，也是第二大的電氣鋼片生產者。

Voestalpine 發明及完善生產高質素鋼材的 LINZ 法。全球有 80%鋼材都是用 LINZ 法生產的。另外，她亦發展了另一稱為 Head Special Hardening (HSC) 的技術；現在越來越多人採用 HSC 這技術。她在歐洲是生產最多路軌的，在全球則生產過最長的路軌。她的鋼材供應至世界 60 多個國家。她為全球 21 間交叉路軌工廠製造開關。每月的生產量有 71,000 噸路軌。

Voestalpine 每月需要 5,041,000m³的水來清潔、冷卻及控制產品。換言之，水被暴露於熱、侵蝕、污染物、毒素和其他事物之中。加能德活水科技(OGT)能令冷卻更穩定一致，亦能保持模具清潔，減少清潔次數，兼可將高質素的水退還給大自然。

跟據格蘭特(Grander)先生的觀點，水吸收了各樣事物的能量振頻。OGT 能針對這些問題的根源，「刪除」這些負面能量；從而將水還原，最終令世界更清潔、更美好。
